

Supply Chain audit based on VDA 6.8

VDA Volume 6.8 is an international quality standard for minimizing risks in the overall supply chain. Its purpose is the standardization, stabilization, optimization and safeguarding of logistical processes.

The supply chain audit consists of questions from VDA 6.8, with a focus on the questions listed below. The VDA calculation principles apply.

The supply chain audit result and its consequences are the following:

A-Rating 100% - 90%	B-Rating 89.9% - 80%	C-Rating ≤ 79.9%
A nomination is possible.	A nomination is possible. An improvement plan must be developed and completed within a reasonable timeframe.	Nomination is not possible within Volkswagen Group. An improvement plan must be developed and implemented within a reasonable timeframe. Nomination is only possible if an A- or B-rating is achieved in a re-audit, which may be charged.

No.	No. VDA	Question
Process element 1 - Project management/strategy		
1.1	1.1.1	* Are requirements integrated into project management and continuously taken into account?
1.2	1.2.3	* Has a project management (including a project organization) been established?
1.3	1.2.4	Has an escalation process, including coordinated communication, been established, and is it effectively implemented?
1.4	1.2.5	* Are methods of risk analysis established at the start of the project phase, and are they implemented?
1.5	1.4.1	Is there a suitable IT emergency solution strategy, incl. regular data backup?
1.6	1.4.2	* Is there a suitable pervasive IT infrastructure?
1.7	1.5.1	* Have suitable KPIs been defined for project management, including target values, and are they applied?
1.8	1.5.4	Are methods of continuous process improvement implemented?
1.9	1.6.3	* Has a handover to the downstream process taken place?
Process element 2 - Planning of logistical processes		
2.1	2.2.3	* Is material master and material flow data defined in the planning process and continuously monitored?
2.2	2.2.5	* Are the processes for in-house logistics, including packaging and container management, defined in planning, and are they continuously adjusted? <i>Packaging and container management / In-house-logistics</i>
2.3	2.3.4	* Are the necessary human resources available?
2.4	2.6.1	* Are all processes from the process flow effectively/efficiently implemented, reviewed and communicated and available as results?

Process element 3 - Supplier and service provider management

3.1	3.2.1	*	Has a process been defined which ensures that only approved and quality-capable suppliers and service providers are used?
3.2	3.2.2	*	Is there a supplier and/or service contract, and are all binding obligations analyzed, taken into account and observed?
3.3	3.2.3		Has an emergency management plan been agreed with the supplier and/or the logistical service providers, and is it effectively implemented?
3.4	3.2.4		Is there a complaint process which has been coordinated with the supplier and/or the logistical service provider?
3.5	3.2.6		Has standardized communication been established between the organization and the supplier and/or service provider?
3.6	3.4.2	*	Is there a suitable pervasive IT infrastructure?
3.7	3.5.1	*	Are suitable KPIs available in the supplier and service provider management, incl. realistic target values?

Process element 4 - Procurement logistics

4.1	4.1.4		Is the planned production volume integrated into material requirements planning?
4.2	4.2.1	*	Have processes been established for ensuring that materials are supplied in accordance with demand?
4.3	4.2.2		Has a container management system been established in accordance with demand?
4.4	4.2.3	*	Have processes and concepts (inventory types) been defined for systematic inventory audits and analyses?
4.5	4.2.4		Has an escalation process, including coordinated communication, been established, and is it effectively implemented?
4.6	4.2.5	*	Does production planning and control take place?
4.7	4.4.2	*	Is there a suitable pervasive IT infrastructure?
4.8	4.4.4		Is the availability and corresponding use of the delivery schedule ensured with an EDI standard?
4.9	4.5.1	*	Are suitable KPIs available in procurement logistics, incl. realistic target values?

Process element 5 - Transport logistics

5.1	5.1.1		Is the output fo the upstream process integrated into transport logistics? <i>Transport concept / Commissioning transport services</i>
5.2	5.2.1	*	Is the cargo handled according to the requirements for transport?
5.3	5.2.4	*	Are all relevant specifications for carrying out transports fully documented and included in instructions?
5.4	5.4.1	*	Is there a suitable comprehensive emergency solution strategy?

Process element 6 - In-house-logistics

6.1	6.1.3	*	Is the right order data prepared and processed in in-house logistics?
6.2	6.2.1	*	Are all relevant specifications for providing logistical services recorded and included in instructions?
6.3	6.2.3	*	Do the defined instructions contain the necessary checks?
6.4	6.2.4	*	Are potentially faulty and/or faulty goods or logistical processes identified and measures taken?
6.5	6.2.5		Is the flow of materials and parts secured against mixing/wrong items?
6.6	6.2.6	*	Have processes been established for controlling and monitoring the material flow? <i>Material flow and movements / Inventory control / Asset management method (FIFO)</i>
6.7	6.2.7		Have processes been established for controlling and monitoring the transport equipment?
6.8	6.2.8		Has a process been defined for continuous warehouse optimization, and are suitable optimization measures implemented?
6.9	6.2.9	*	Are the materials stored/handled appropriately in order to preserve the product characteristics?
6.10	6.2.10	*	Are the capacities and flexibilities planned and defined in accordance with customer requirements?
6.11	6.4.1	*	Is there a suitable comprehensive emergency solution strategy?
6.12	6.4.2	*	Is there a suitable pervasive IT infrastructure?
6.13	6.4.3		Are the workstations set up in accordance with ergonomic, product-specific and safety principles?
6.14	6.4.4	*	Is the logistical infrastructure capable of meeting the product and process-specific requirements?
6.15	6.4.5		Is the equipment available at the right location and in the right time, quantity and quality?
6.16	6.4.6		Is the availability of infrastructure and equipment ensured?
6.17	6.5.1	*	Have suitable KPIs been defined in in-house logistics, including target values, and are they applied?

Process element 7 - Customer management

7.1	7.2.1	*	Are all relevant specifications for customer management recorded and included in instructions?
7.2	7.2.2	*	Does proactive communication take place on all levels, and does this communication include any relevant changes?
7.3	- - -		Is current delivery status identifiable at any time? (Customer specific question VW Group)
7.4	7.5.1	*	Have suitable KPIs been defined for customer management, including target values, and are they applied?
