

Name:

Li Jiajun

Gender:

Male

Birthday:

Dec.1983

Location:

Shanghai, China

Status:

Married

Telephone:

+86-13761058893

Mail:

lijiajun_vwpt@163.com

Professional Summary

Supply chain executive with 20+ years of Volkswagen Group experience, specializing in building Europe-quality supply chains from ground up. Expert in VDA 6.8 audits and cross-cultural team leadership.

Working experience

- 2022.05 ~ Present

Audi China Supply Chain Great Asia
Supply Chain Auditor and Planner
- Volkswagen Group Supply Chain Audit (for potential suppliers):

As a certified expert in VDA 6.8 (Supply Chain Process Audit) for the Group, I have represented top European brands such as Audi, Porsche, and Lamborghini in conducting comprehensive admission audits of the end-to-end supply chain processes for over 100 target suppliers across the Asia-Pacific region. These audits includes both info & material flows throughout the entire chain—spanning planning, procurement, production, in-house logistics, and shipment. The audit conclusions serve as mandatory precondition and critical decision-making criteria for suppliers to secure Volkswagen Group’s global project sourcing, demonstrating my deep understanding of European customers' core requirements for supply chain transparency, reliability, and risk control.
- Strategic Supplier Empowerment and Maturity Management (QPNi)

• As part of the Group's supply chain cost optimization and electrification strategy, I focused on coaching unperforming or cross-industry suppliers through customized improvement plans. This approach enabled 13 suppliers to meet Volkswagen’s strict standards, supporting the successful launch of 6 new projects.

• Guided by the Volkswagen QPNi maturity framework, I drove targeted suppliers to improve their supply chain maturity. As a PPE CN Project core member, I managed and supported over 11 key suppliers (including but not limited to Sanhua, Minth, Thyssenkrupp, Schaeffler, and ZF) to establish qualified work flow & processes for meet maturity targets on schedule, ensuring timely project milestone delivery.
- Full-Cycle Supplier Capacity Management

• Led supplier capacity planning and increasing during new project phases: conducted on-site reviews and provided technical guidance to optimize critical process cycle times (e.g., improved C.T. of assembly line at a German owned brake caliber plant from 35.4s/pcs to 27.3s/pcs, nearly 22% improvement), enhanced production stability, and refined production planning to ensure capacity met project ramp-up demands.

• Supported mass production phases: intervened promptly to resolve supplier capacity bottlenecks and supply disruption issues.
- Supply Chain Consulting & System Enablement (Built from ground up)

• Led the end-to-end establishment of Audi China's external supply chain consulting business (completed framework design, process formulation, and implementation within 3 months). Transformed VDA6.8 rigorous supply chain standards, management processes, and best practices into market-ready consulting solutions. Successfully delivered projects for external customers, achieving significant cost reduction and efficiency gains (e.g., helped a German owned enterprise reduce operation and warehousing costs by nearly 17%).
- 2006.07 ~ 2022.05

Shanghai Volkswagen Powertrain Co., Ltd. / SAIC Volkswagen
- 2010.07 ~ 2022.05

Expert of supply chain management
- Supply Chain Risk Prediction & Decision-Making

Led proactive risk assessment and decision-making by monitoring capacity, supply-demand, and market dynamics of 150+ material groups (covering 500+ critical components). Anticipated potential disruption risks (e.g., chip shortages, capacity limits) and provided key inputs to S&OP (Sales & Operations Planning) to drive capacity adjustments and production scheduling optimization.
- Risk Mitigation Framework Development

Established a supply chain risk analysis model and developed contingency plans (e.g., secondary supplier qualification, safety stock strategies) to ensure production continuity.

2006.07 ~ 2010.06

Disposition / Material planner

Education

2002.09 ~ 2006.06

Shanghai Maritime University

Bachelor in Marine engineering

Core Competencies & Certification

- Europe Market Entry & Qualification (VDA 6.8)

• Supply Chain Consulting & System Implementation
- Strategic Supplier Development & Maturity Management (QPNi)

• S&OP
- End-to-End Supplier Capacity & Risk Management

• Certificate of VDA6.3 & VDA6.8

Audi China Supply Chain Consulting Business Launch (2025)

As a founding project lead, I established Audi China's first external supply chain consulting unit from scratch. Within three months, I designed the business framework, built processes, and created an implementation roadmap—transforming Volkswagen Group's internal standards and best practices into market-ready consulting solutions. We successfully delivered projects to external customers, including a German manufacturer, helping them reduce end-to-end operational and warehousing costs by nearly 17%. This initiative not only opened a new revenue stream but also reinforced Audi's reputation as a supply chain leader in the region.

PPE Project Supplier Supply Chain Maturity Enablement (2023-2025)

As the core architect of the methodology, I built and implemented a supply chain maturity system for PPE key suppliers. Based on Volkswagen's QPNi framework, I designed activity-based completion criteria and a rating mechanism, and launched an integrated tracking tool for real-time maturity scoring. Using VDA6.8, I developed phased implementation guides and clear cross-functional collaboration protocols. This system enabled all suppliers to achieve on-time readiness for mass production, securing PPE project milestones. The resulting framework and tools are now standardized assets reused across the Group's EV programs.

Digital Optimization and Closed-Loop Management Enhancement of Key Supplier Capacity (2023-2025)

Led the development and implementation of a 'Planning-Diagnosis-Optimization-Monitoring' closed-loop capacity management system, focusing on transforming on-site production activities into structured data. By developing visual tracking tools, on-site actions such as equipment operation, personnel scheduling, and material flow are mapped in real-time into key metrics like OEE, takt time achievement rate, and abnormal downtime, enabling the production process to be measurable, analyzable, and predictable. Based on data insights, bottleneck processes are systematically identified and lean improvements implemented, significantly enhancing key production line efficiency and overall equipment effectiveness. This system has successfully supported PPE projects (including models Q6, A6, etc.) in ramping up supplier capacity according to schedule and has laid the data foundation for supply chain system integration and intelligent management, creating a replicable 'shop floor-system-management' parallel advancement model.

Globalized Capacity Coordination and Flexible Supply System for Cylinder Head Cover Assembly (2013-2018)

In response to the coordination challenges of multi-tier supply chains, a globally linked capacity system covering seven production bases was primarily established. By creating a dual-track mechanism of 'multi-base domestic coordination and resource supplementation from ThyssenKrupp in Germany,' short-term supply gaps were promptly filled using German resources during critical capacity ramp-up periods, while long-term capacity layout was optimized through direct scheduling between domestic parts and assembly bases. Under the premise of controlling additional investment, this project successfully increased annual supply capacity to approximately 3.2 million units, effectively balancing short-term supply pressures with long-term capacity risks. It established a global coordination model that combines cost efficiency with supply flexibility, providing a replicable solution for managing complex components in multinational supply chains.
